Beneficiaries (users)

Users are incentivized to accurately and continuously participate not only out of self-interest, but because they can more effectively and efficiently conduct trainings and see results.

NGO's (clients)

Clients receive real time reporting on the effectiveness of their development programs. This helps them not only improve their impact, but also — critically — respond to and cultivate increasingly sophisticated and scrupulous donors.

- Submit status reports
- Fix basic issues
- Request maintance

- Comprehensive impact reporting
- Impact data direct from beneficiaries

Cost-Savings in Maintenance & Repair of Water Systems

Well Beyond app reduces water system issues needing a technician, as well as save on funding of technician repairs so that NGO's can use that funding for other programmatic work.

Reduction in Down-Time of Water Systems

When the water is not flowing from the well, everyone suffers. Using the Maintenance & Diagnostic features of the Well Beyond app minimizes the time spent without water from this vital resource.

Training Tracking in Real Time

Increasing documentation of training and results of training in real-time enables our clients to reduce costs of manual feedback and reporting, as well as costs of team time.

Program Improvement Indicators

Through the analytics dashboard, key indicators of program strengths and weaknesses are evident and actionable. Metrics on programmatic outcomes informs the NGO's team immediately of program needs.
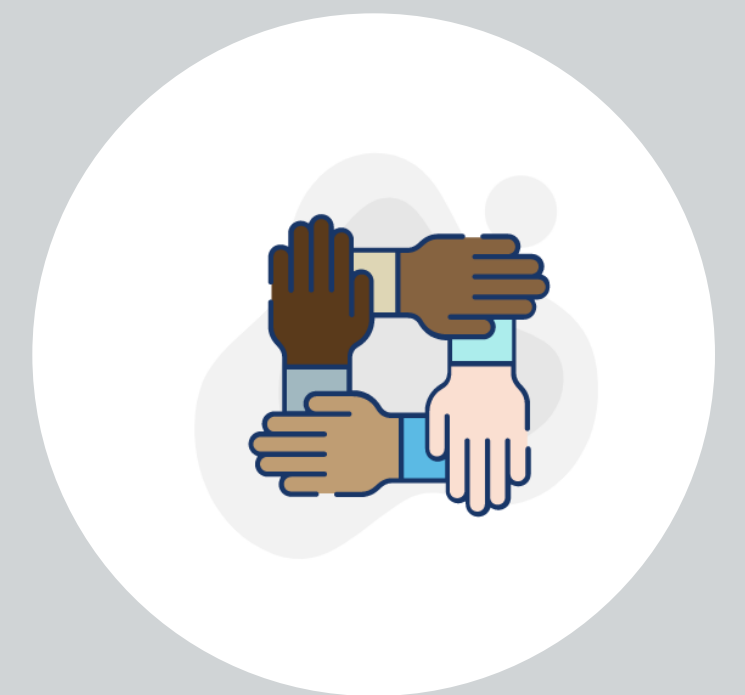

Fast Reporting for Funder Cultvation

Having program results in your analytics dashboard provides immediate impact reporting for grantors. In our world of growing transparency, this form of grant dollar use is incresingly important to large funders.

Administrative Dashboard
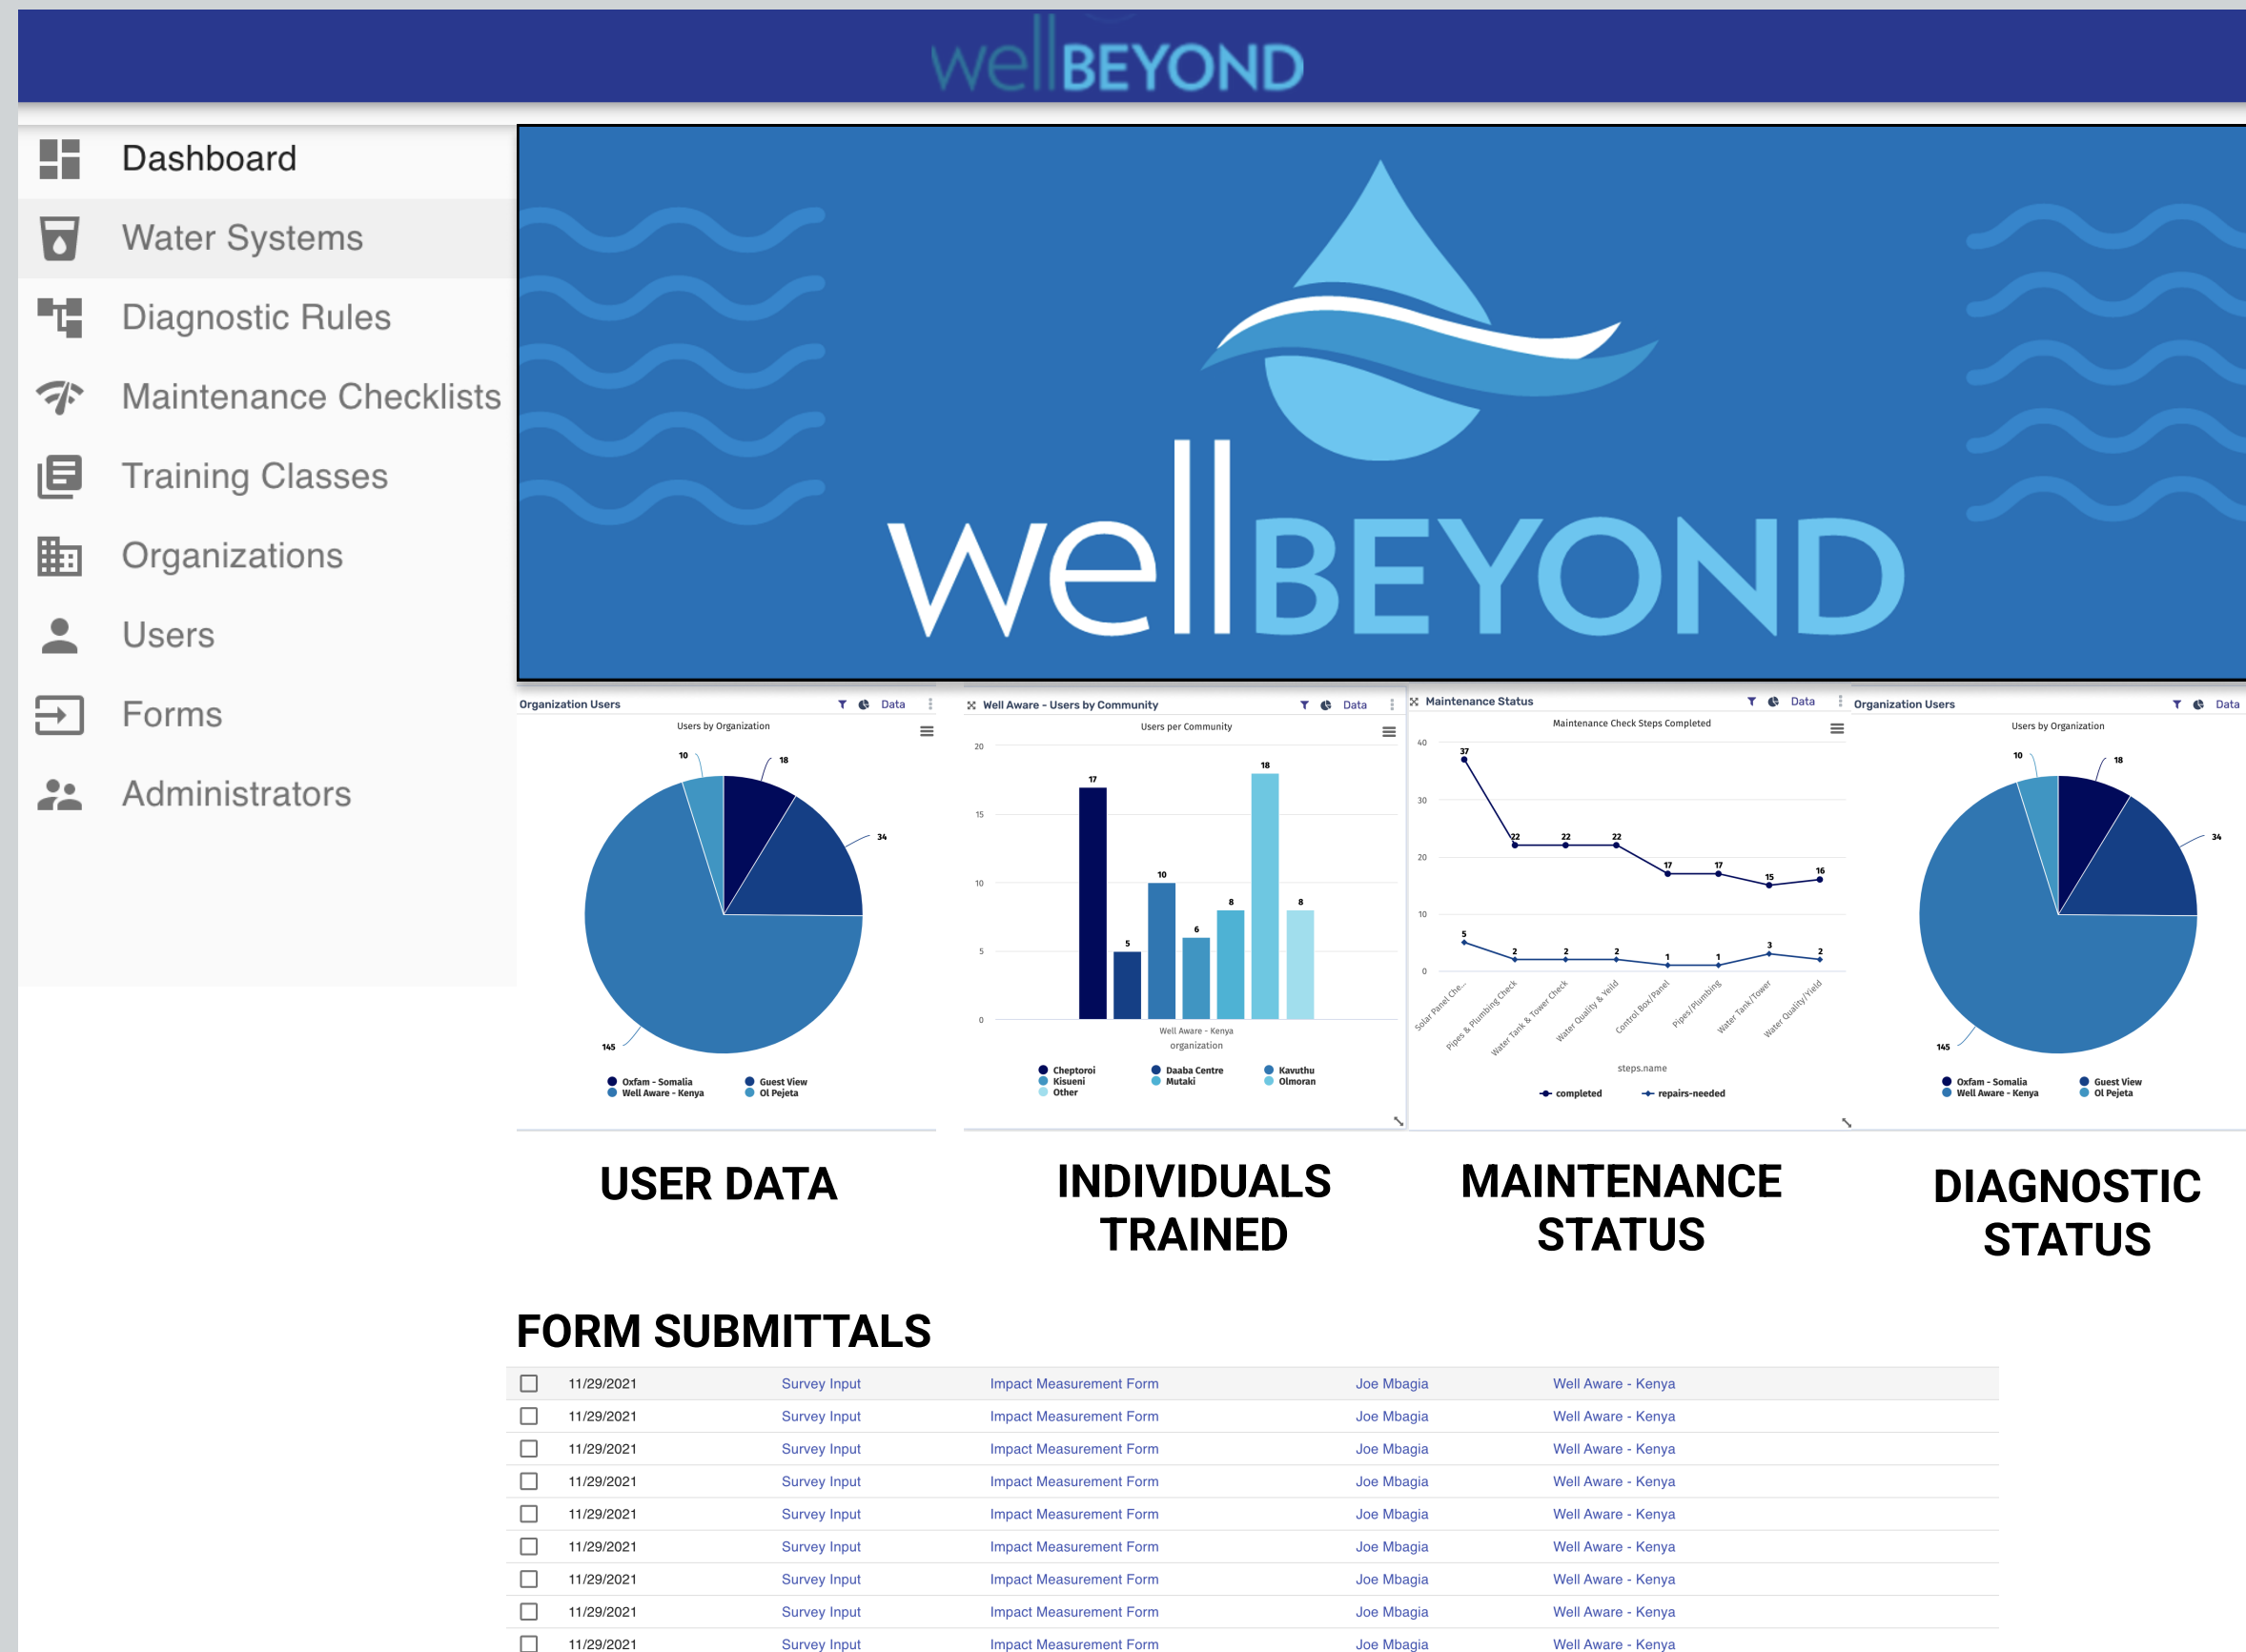

- Remotely manage, support, and report on all projects in one place

- Discover trends in product and design to inform future projects for greater program success

- Access complete program history in one location, including team submissions, maintenance activity, field reporting, and infrastructure diagnostics

- Track community progress, training completion, and knowledge gained

- Collect data on water system success, measure impact, and ensure results

Coming Soon!

Crypto currency remittance for beneficiary interaction with the Well Beyond App will further incentivize users to submit forms and updates at no additional account fee for our clients.

Enterprise

For large multi-region teams.

Everything we can do to empower you and support your mission.

- Unlimited Client Administrator and Manager User seats
- Advanced Analytics
- Custom designed training modules and water system maintenance & diagnostics

Pricing
starting at

$1,950/monthly

Testimonials

" *"Prevention is better than cure, and that's why the app has proven to be a great necessity in our community"*
-Naomi, Community User

" *Our teams in East Africa have been deploying the Maintenance features of the Well Beyond App for about nine months now, and we have 30 communities using this tool with incredible results so far. Knowing that each community is doing quarterly maintenance is going to make our water systems last even longer, and we're catching issues that will save us a lot of money in the future.*
Kareece Sacco, Executive Director, Well Aware "

" *The app has proven to be a great necessity in our community. The WASH tool is really great especially the option of training a group, it is relatively simple to train quite a large group. And the Swahili version has made it easier for the message to reach everyone despite their literacy level and economic background.*
– John, Community User "
